

For effective removal of fluoride

as well as a range of other contaminants which can occur in mains water supplies such as:

- Sediment
- Dirt & rust
- Chlorine
- Taste & odour
- Giardia & cryptosporidium
- Heavy metals

For the ultimate in water filtration, the Snowy River System represents great value for money. With filtered water costs as low as a few cents per litre, end users are assured of high quality, pure drinking water.

This system removes minerals including salt, lead, manganese, iron, and calcium/hardness, and up to 98% of chemicals and bacteria as well as fluoride.

All Snowy River Undersink Systems feature:

- High Capacity pre-filter cartridges & membrane for long filter life and exceptional system economics.
- A complete filter assembly which includes all necessary plumbing components & fittings, together with a highly durable water storage tank, everything required for installation.
- Compact design which is easy and simple to install and maintain.
